

# AutoViri™ Solutions

by CapStone Technologies

Maximize throughput and profits with software and robotic automation built for the print-to-mail industry.

**Fast return on investment.**

**Eliminates 17 USPS  
Mailer Scorecard errors.**

**Customizable to improve  
mail operations of any size.**

# INCREASE productivity. OPTIMIZE output. MAXIMIZE efficiency. REDUCE labor.

**AutoViri Solutions bring mailers the efficiency they need to stay competitive in an always-changing industry. Through robotic automation and customizable software, AutoViri Solutions address your unique challenges to boost productivity and profits. Implement just one component or use many – it's designed to be molded into a solution that fits your operation.**

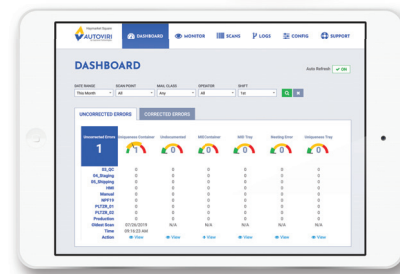

## AutoViri Software

### Easy to Implement and Use for Immediate Results

Patented AutoViri Software is the only software that connects your physical and digital mail operations. It uses a hand scanner and clear dashboard to put you in control of your mail operation, simplifying USPS compliance and eliminating assessments for 17 Mailer Scorecard errors.

It's built to suit the needs of any size mailer with an implementation expert included at no charge to make sure you get the maximum value for your business.

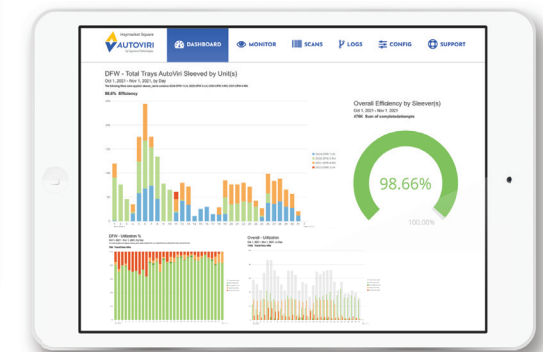

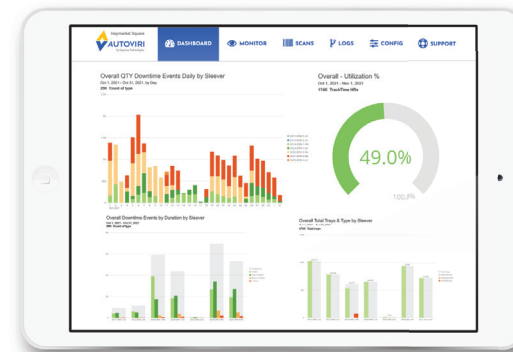

- Ensures the digital eDoc postage you submit matches the physical mail shipped so you can fix potential USPS Mailer Scorecard errors before mail leaves your building
- Keeps your whole team informed of any job's progress and provides production visibility into your operation 24/7 from anywhere
- Creates a proven audit trail for timely resolution of operational issues or USPS dispute

**Patented Software That Simplifies Your Operations**

## AutoViri IIoT Analytics

AutoViri IIoT Analytics provides operational insights and enables process optimization by providing real-time and/or historic data visualizations either online or by email to help identify and resolve issues. Users can segment analytics with pre-built filters to glean insights and share meaningful insights inside and outside the organization. Facilitate timely and informed decisions for optimal performance by monitoring machine, production and/or staff KPIs for volumes, velocity and variety against established KPI target thresholds and trigger actionable alerts for underperforming KPIs. The IIoT Analytics also enhances predictability of SLA delays, labor and OT spend, and service/maintenance.

## AutoViri Robotic Automation

### Take Highly Repetitive, Manual Tasks to a New Level

AutoViri robots can address any challenge in your print-to-mail process with a fast ROI that starts boosting your bottom line quickly.

- Increase overall throughput and efficiency
- Prevent human error and redeploy your team to higher-value work
- Optimize performance of existing upstream/downstream equipment

## AutoViri Tagger

The Tagger prints tray tags and pallet placards (USPS and/or non-USPS) on-demand. The Tagger's mobile, cross-machine compatibility allows tags to be printed anywhere on your production floor and can be dedicated to a single device or rotated across several devices. It also provides real-time visibility of production data from any web-enabled device anytime, anywhere, and the data is automatically uploaded to a secure cloud connection for reporting and verification.

## AutoViri Sleever

One operator can monitor multiple AutoViri Sleever units at full capacity with intelligent tray loading and recognition that frees the rest of your team to focus elsewhere. The modular, self-contained design takes up a small footprint that replaces a 10-foot conveyor section.

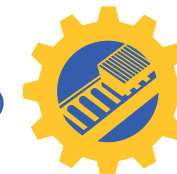

## AutoViri Palletizer

Just one AutoViri Palletizer can build at least six pallets concurrently, automatically palletizing all finished letter-size mail trays while creating a complete audit trail to prevent costly USPS assessments. This robot lets you accommodate growing volume and separation needs without any loss of throughput.

## AutoViri Tray Management System (TMS)

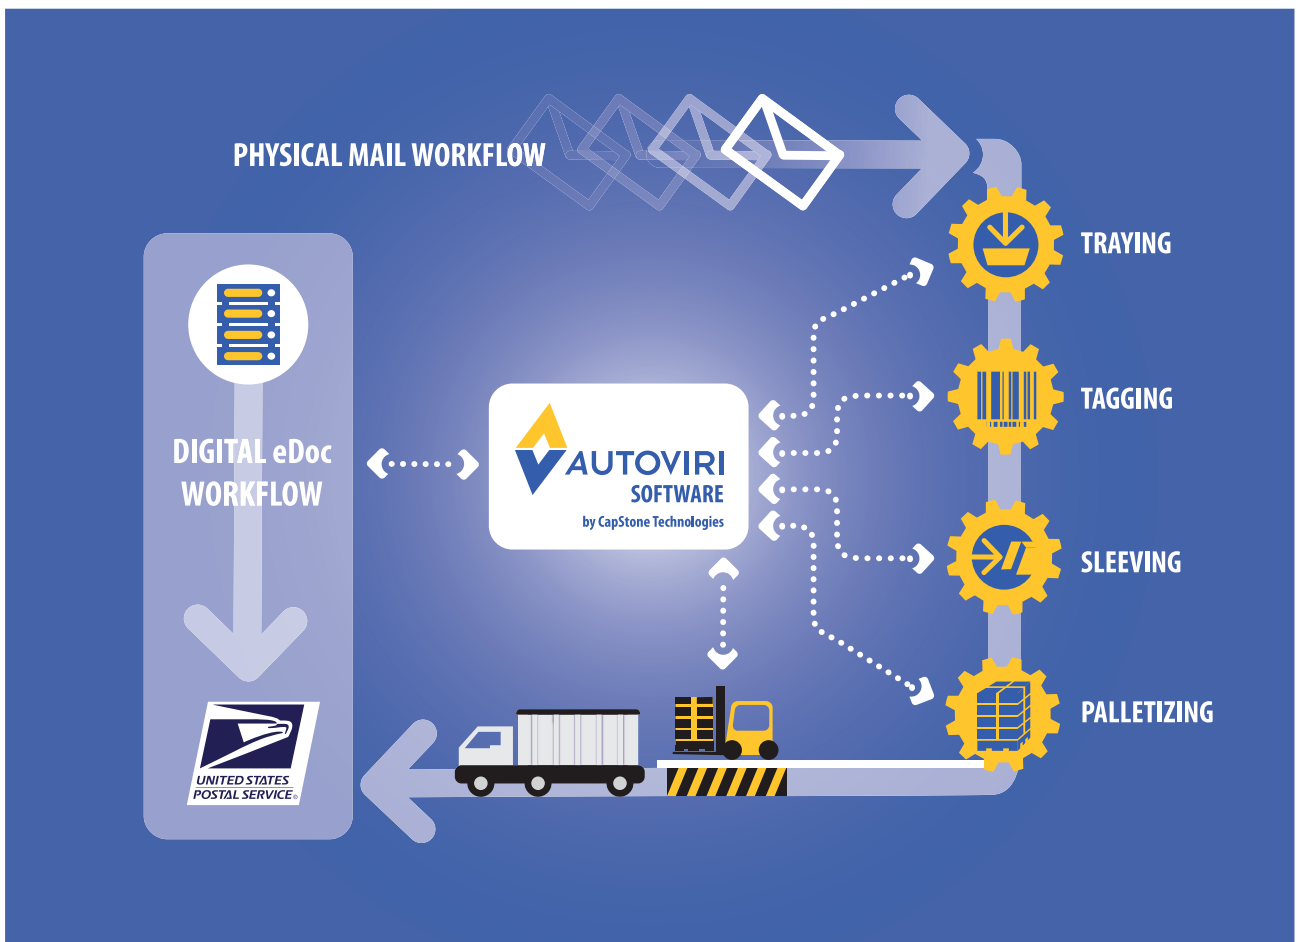

More than just a conveyor, the TMS is an intelligent production system that automatically delivers trays and packages to the next step in your process. Besides eliminating labor-intensive material handling, it increases in-plant accuracy and efficiency with routing you control.

## AutoViri OptiSort Shelving

AutoViri OptiSort Shelving increases efficiency by separating and staging jobs, adding flexibility to any production workflow with multiple sort schemes. Tough, modular and ergonomic, it works with all major sorter manufacturers and can be added onto or changed as needed.

### Do More with AutoViri Solutions

More efficiency, productivity and accountability – AutoViri Solutions deliver the operational results that make your business more profitable and competitive.

Developed by the industry experts at CapStone Technologies, AutoViri Solutions solve operational challenges that have been plaguing you for decades – today and for years to come.
