AutoViri™ Software

Streamlines Any Mail Operation.

The Only Software That Connects Your Physical and Digital Mail Operations

AUTOVIRI
by Capstone Technologies

AutoViri Software Makes Operational Excellence and Compliance Easy

AutoViri Software is a patented solution that integrates your mail operation's physical and digital workflows, giving total production visibility to everyone in your business.

Everyone on your team – from customer service to sales to planners/schedulers to production and operations managers – will benefit from the better, more timely insights into production that AutoViri Software provides.

Simplify your operation.
Better visibility means better output from your production team on the floor with less downtime. They'll be able to see jobs running, jobs completed, jobs shipped, eDoc submission and USPS Mailer Scorecard risks all in real time with alerts so they can identify and resolve production issues faster.

Managers will be able to see areas where mistakes and reduced throughput occur repeatedly so they can address issues and retrain employees where necessary.

As a leader, you'll benefit from a bird's eye view of your company's overall mail operations health and productivity so you can make better strategic decisions.

Protect your bottom line.
Through its automation efforts, the USPS now has nearly 100% visibility into the mail stream – and any mistakes you might make.

With AutoViri Software, you can find and fix 17 costly USPS Mailer Scorecard errors before you release jobs to the USPS. You'll protect your workshare discount by preventing errors while your jobs are still under your control.
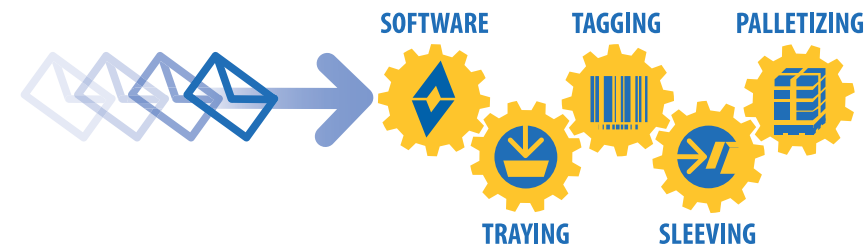

Earn the USPS Seamless Acceptance incentive.
The USPS is now offering eDoc submitters an incentive of $.001 per mail piece for the pieces that qualify for Full-Service prices in the mailing, as long as the submitters use their enterprise payment account. This can mean big savings for your print-to-mail operation.

If you aren't already in full Seamless Acceptance and are wary to dive in, AutoViri Software helps ease your worries and get Seamless Acceptance right by connecting your physical and digital workflows so you can make sure jobs are accurate before they leave your facility.

Simple, Seamless Software to Help Your Business Succeed

AutoViri Software is cloud-based software that brings you peace of mind with total visibility of your mail operation 24/7 from anywhere, freeing you to focus on growing your business instead of fretting over every job. The software allows you to drill down into areas of concern or individual job progress, as well as take a top-line view of overall productivity.

SOFTWARE · TAGGING · PALLETIZING · TRAYING · SLEEVING

The software can be used with or without our robotic technology. Whether you're fully automated, completely manual or anywhere between, AutoViri Software offers customized deployment to suit your production setup, so you'll never pay for features you don't need. But customized doesn't mean complicated – it's simple to implement and use at every level of your business.

What you'll get:
- Unlimited user access
- Unlimited support from a library of online resources
- Live customer support
- Automated software updates at no charge

Who Should Use AutoViri Software?
Continuous Mailers | Presort Mailers | Lettershops | Co-Palletization Mailers

# Patented Software That Simplifies Your Operations

Dashboard
The AutoViri Dashboard shows real-time production metrics and USPS Mailer Scorecard errors before mail leaves your facility.

Activity Log
The Activity Log serves as an audit trail, showing all scans in a chosen period so you can review how trays/pallets progressed across the production floor.

Validation Log
The Validation Log allows you to review all detected errors so you can pinpoint ongoing issues and implement corrective actions or training as necessary.

Fast, easy activation.

CapStone Technologies will send you the AutoViri Software start-up kit that includes one handheld Android scanner preloaded with the AutoViri Software. Simply connect the scanner to your network and access your AutoViri cloud-based account on any network computer.

Once connected, you'll be scanning trays and pallets to build digital files of the actual physical mail being shipped from your operations – and enjoying all the benefits AutoViri Software provides.

Effortlessly update your eDocs to precisely match your physical mail pieces.

View job progress in real time from anywhere in the world – or right on the floor.

Generate an audit trail to protect against unwarranted USPS penalties.

Quick, simple setup.

Ready to Take Your Mail Operation to the Next Level?

With AutoViri Software, you'll increase productivity and make fewer expensive errors. Contact us to get started!
